Subject: **Review of the vegetable production-planning machine-learning project**

Dear Nadil,

Thank you for sharing your student project, "Sri Lankan Vegetable Yield and Next-Month Market Price Prediction for Farmer Production Planning Using Machine Learning", for stakeholder review.

The project addresses a practical agricultural planning problem by combining expected crop-yield prediction with short-term wholesale-price prediction. This approach may help farmers and agricultural planners consider both production and market conditions when making cultivation decisions.

As explained by the group, the project uses Sri Lankan production records, weather and location data, and vegetable wholesale-price data. We understood that its predictions are intended to support decisions rather than guarantee outcomes, since actual yields and prices can also be affected by factors not included in the model.

Thank you for your time and consideration.

Yours sincerely,

.....
